The swimming beach is the coastal part of an open cove, 250 m long. The beach occupies the entire bay and has an average width of 30 m, with a southwest orientation. The coastal zone is natural. Both the coastal zone and the seabed consist of sand. Sporadic vegetation of tamarisks is observed at the border of the beach. The marine flora includes scattered local phanerogamous meadows.

The swimming waters in the first meters have a normal depth, with a gentle slope of the bottom, as the 5 m isobath is observed at a distance of about 150 m from the shore. The area is accessible by road both by private means of transport and by means of public transport.

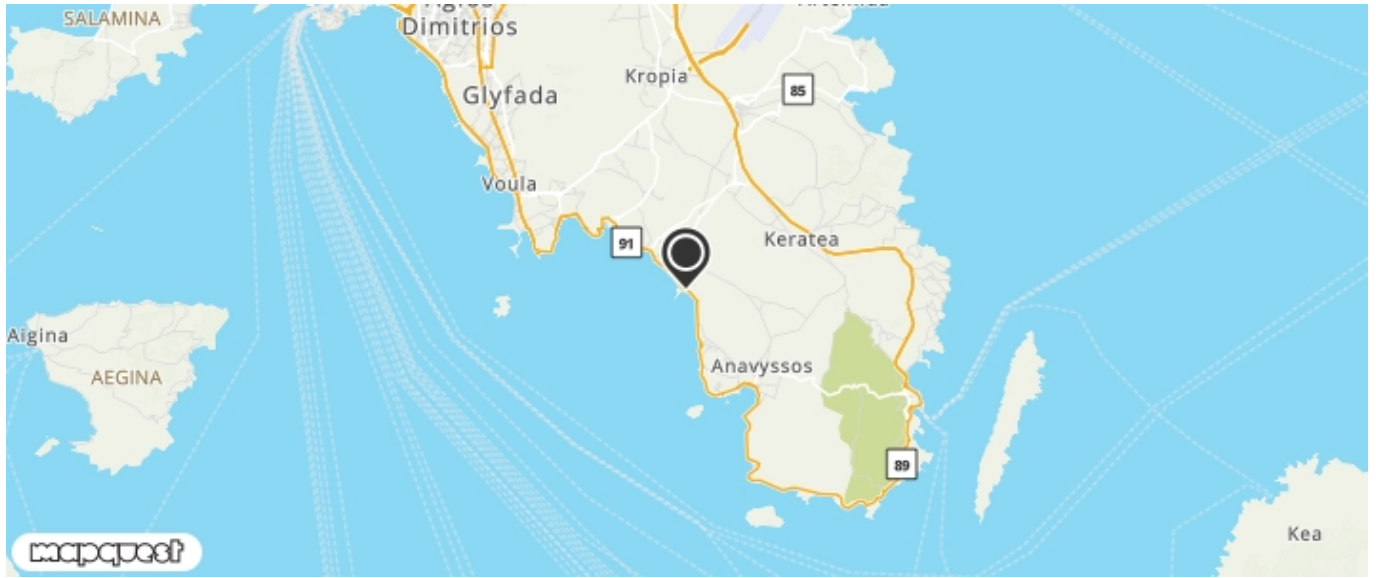

The coast is organized and has infrastructure such as umbrellas with sunbeds, showers, changing rooms, bins and wastebaskets. In addition, to meet the needs of the public, there is a mobile snack area on the shore. The beach is mainly used for swimming.

At the eastern end of the beach there is a cantilever with natural boulders, where small boats are anchored.

Also, a continuous stream flows on the coast.
